

Checklist:

## Reflect on how your product development process is managed

- We always know how to prioritize change requests by release to ensure customer happiness.
- High priority features are clearly separated from low priority features to focus teams and resources on high value creation.
- Managers, engineers, and testers have a consistent flow of communication to collaborate effectively and proactively.
- Managers and Engineers are always provided with the qualifications needed in process methods and tools.
- The members of our teams are constantly increasing productivity and enjoy the fast-paced progression.
- We provide regular product deliveries of known increasing quality using fixed iterations.
- Targets are achieved according to what is planned during the development phases, releases, and sprints.
- Product Development progress tracking, maturity milestones, and value are easily identifiable to stakeholders.
- Feature maturity and progression KPIs are reported on a weekly basis and understood by teams.

### Any checks missing? Room for improvement?

INVENSITY is readily available to answer your questions, walk through your current challenges, and provide initial consultations at no-cost.

We analyze together with you which agile methods and tools for your business and your project situations are the best option and support you in the implementation. Contact us for in-kind services including an in-depth Agile Health Check assessment.
