

Mobile Solutions

Innovative applications for an efficient mobile workflow

Background

Smartphone applications are used in almost all areas of life. In the business environment we also see large and previously little-used areas of application. Applications can be used efficiently and effectively. As an advertising medium, process or communication support.

Offer

In the Center of Excellence Data System, a group of experts deal with the design, conception and implementation of applications for smartphones and other devices. Our experience in this area enables us to develop applications for iOS and Android. We support our clients in the following aspects:

- Creating the requirements for the application
- Conception of the application
- Implementation of the application
- Porting the application to other mobile platforms
- Roll out and integration into the customer system

References

- Creation of a simulator for a solar energy storage system for a global technology company
- Development of an application to simulate an electric vehicle
- Development of an app to support efficient driving for all manual cars
