

# Data Value Report

A systematic and comprehensive data analysis aiming for a fast overview of possible data

- Digital Transformation is the **most important driver for current innovations** leading to scalable, and high profitable business applications
- Valuable data is available in almost every company: **production, machines, digital processes, service requests...**
- For Machine Learning and Artificial Intelligence **data can be of high value.**

How can the available data be used to generate added value and new business opportunities?

# How can you make the first step into Digital Transformation?

To know your possibilities, you have to analyze what you already have

- An analysis of your existing data shows you, which possibilities open up to you:
  - Predictive Maintenance / critical State Recognition
  - Predictive Quality Management
  - **Increased reliability and cost savings** by using virtual sensors
  - **Process simulation** by creating a Digital Twin

INVENSITY supports you analyzing your data and identifying new chances

# What is the fastest way to identify new chances?

Our Artificial Intelligence experts create an individual Data Value Report in a short time period

- Get an insight on the **value of your data** within a timespan of **one week**
- **Visualization** of your data allowing a **deeper understanding**
- Proposed use cases that can be build on either **on your own** or with **INVENSITY as your partner**.
