

Cybersecurity Management Systems

Bjoern Engelhardt, Sebastian Wirth
October 2022

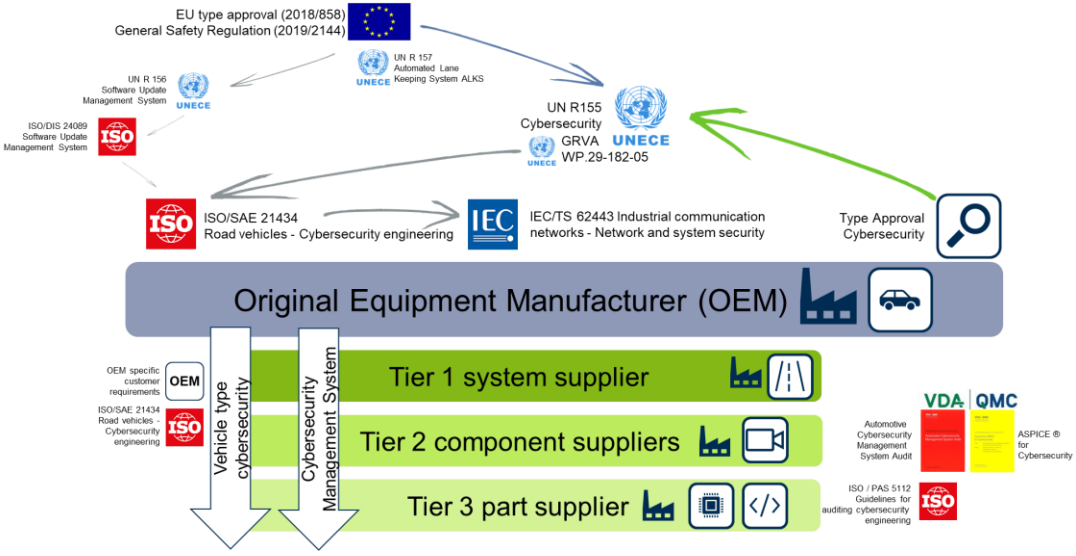

“If I had an hour to solve a problem I’d spend 55 minutes thinking about the problem and 5 minutes thinking about solutions”

Albert Einstein

Reasons for considering cybersecurity are many and vary depending on the industry

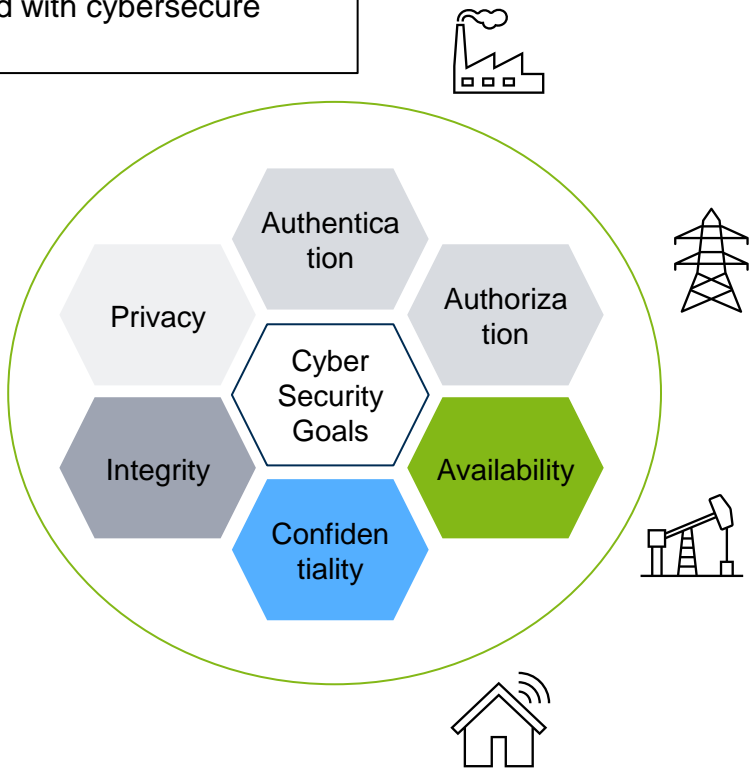

- Automotive

Governmental liabilities

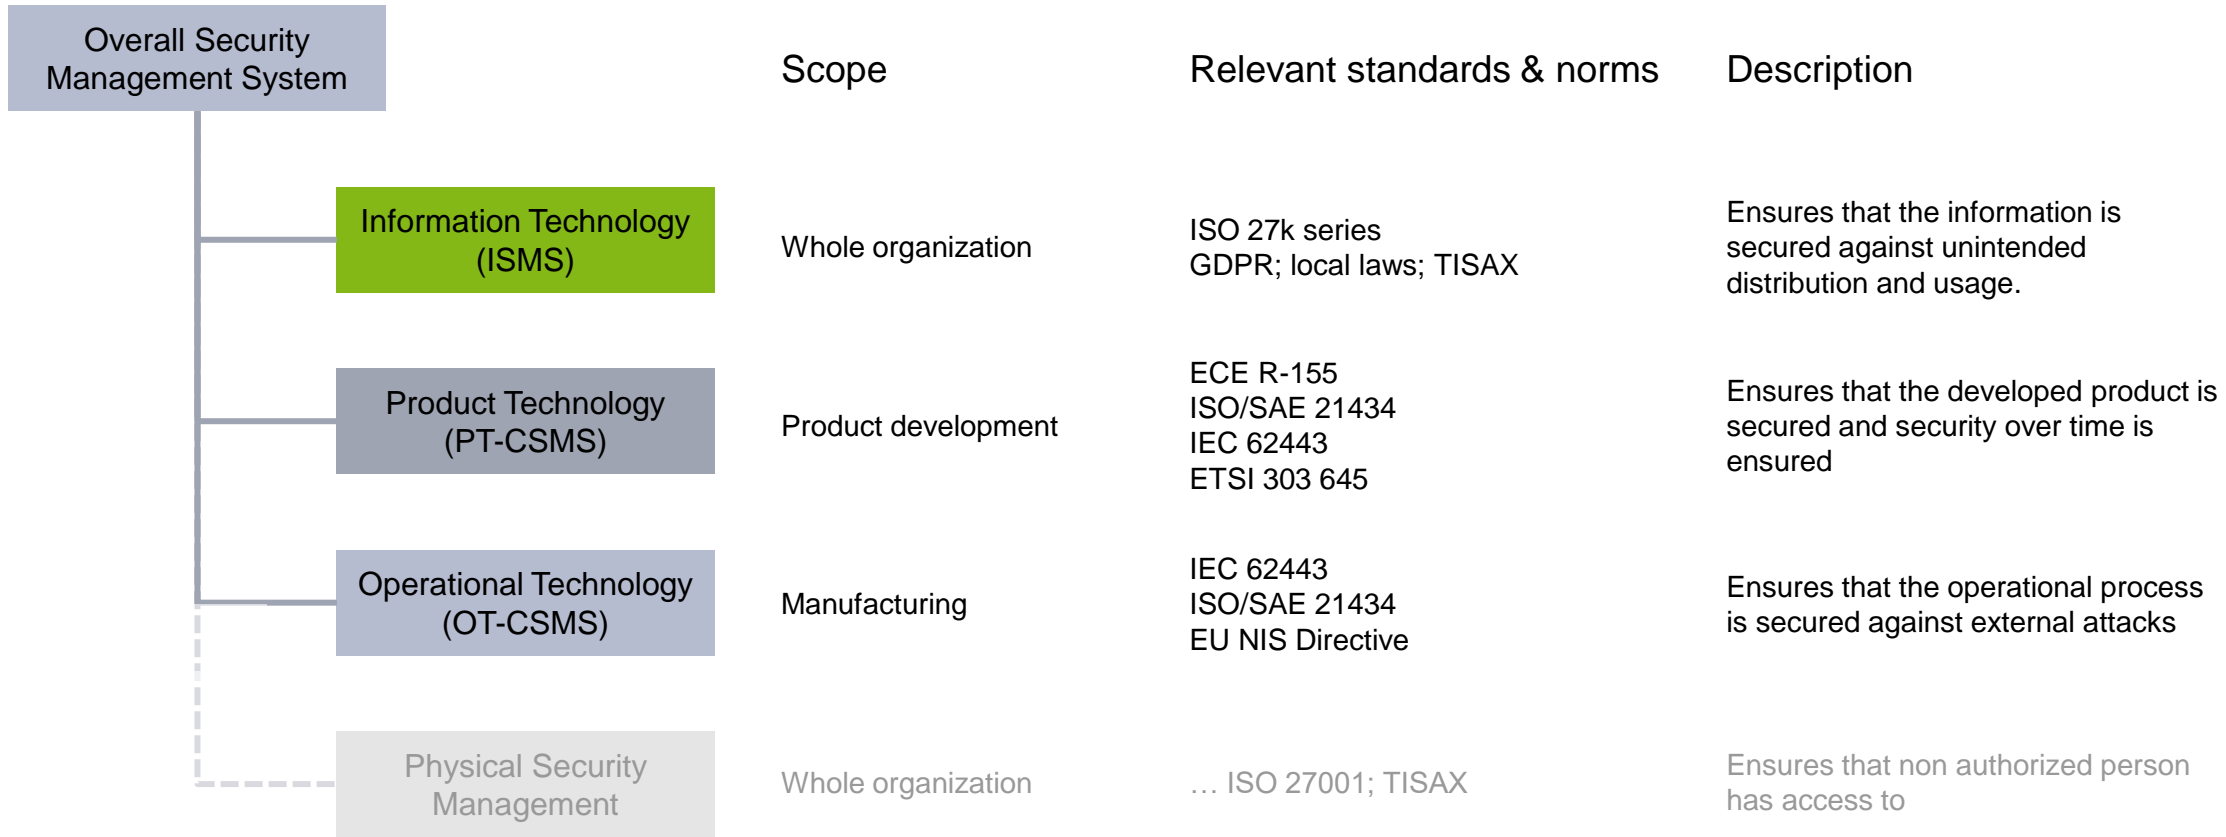

- Special machinery industry

Request of infrastructure operators to be supplied with cybersecure components

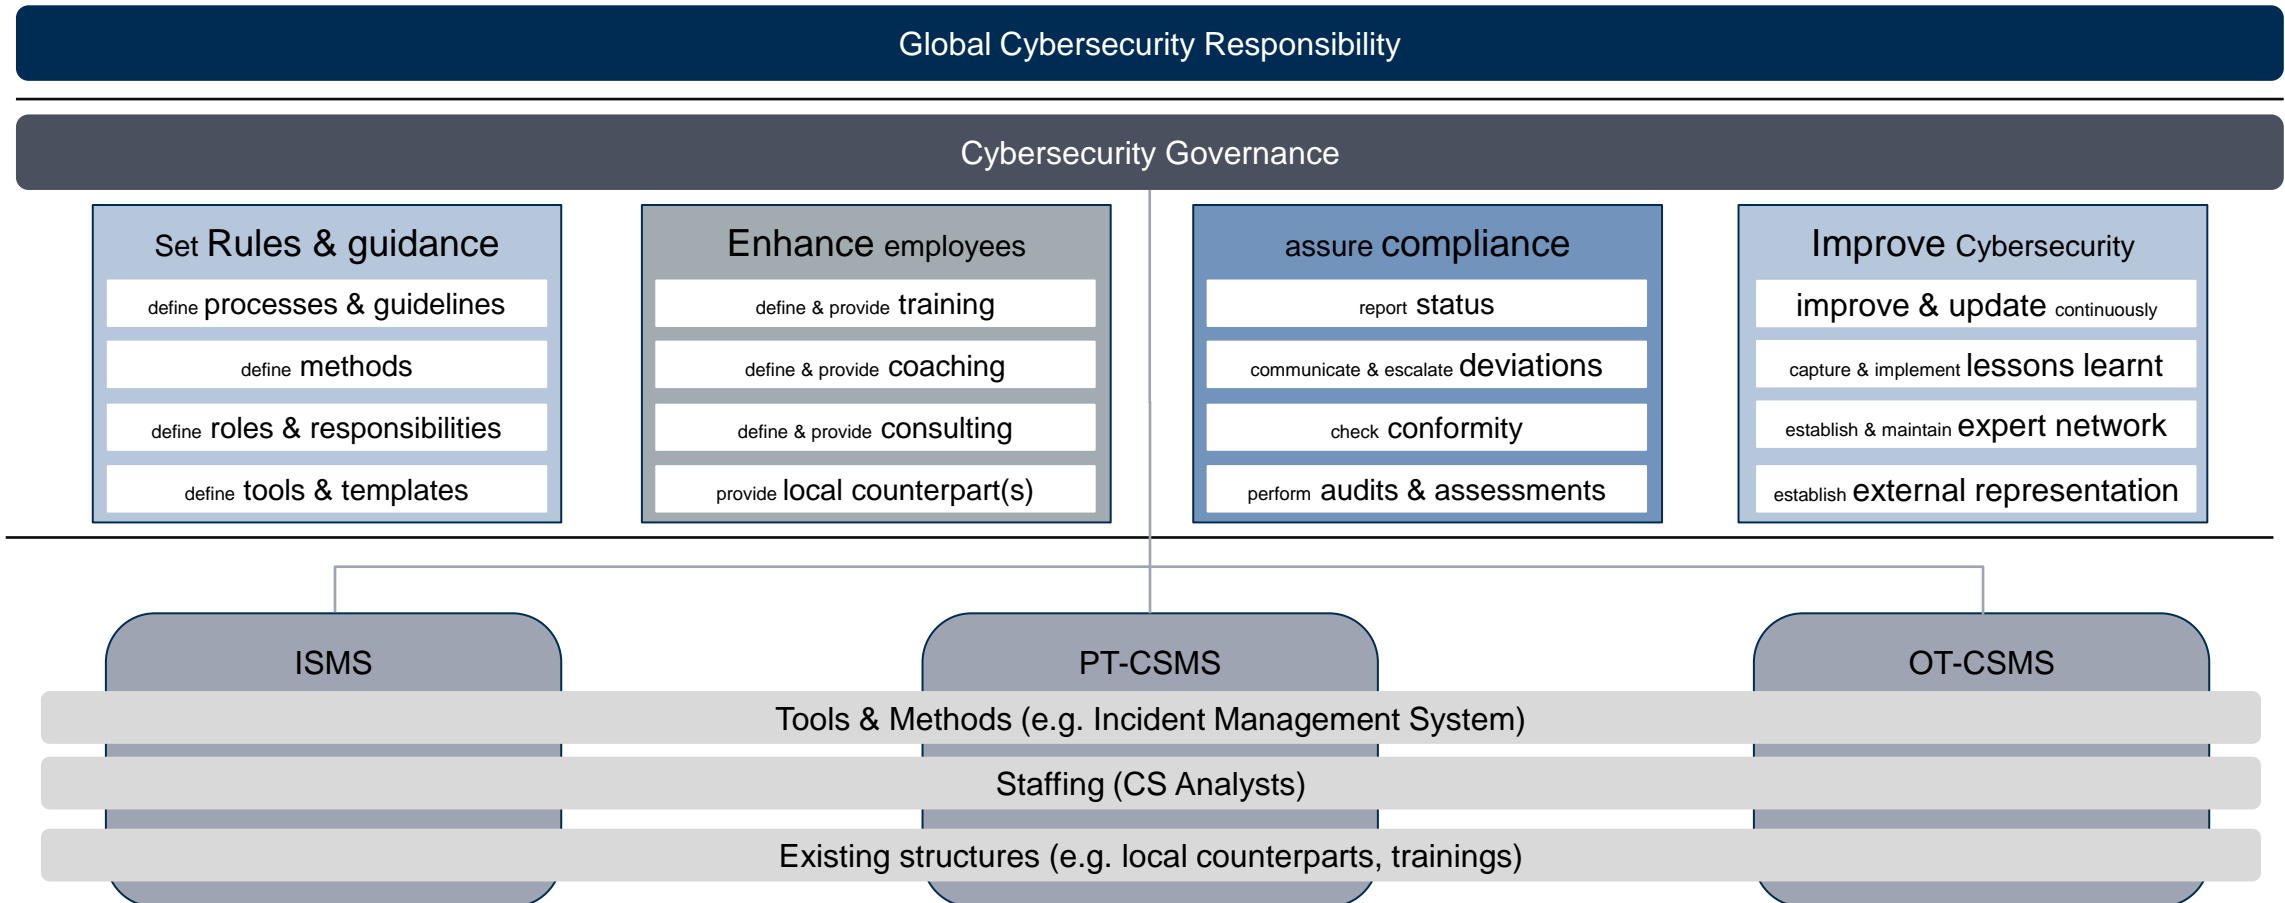

Due to the increasing number of cyber attacks, companies and organizations are forced by their customers as well as government regulations to establish various security measures

Organizational Security Management

A centralization of the relevant security provides synergies in terms of methods, tools and, in some cases, personnel
